

Java

```
class Solution {  
    public long minEnergy(int n, int brightness, int[][] intervals) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number} n  
 * @param {number} brightness  
 * @param {number[][]} intervals  
 * @return {number}  
 */  
var minEnergy = function(n, brightness, intervals) {  
  
};
```

TypeScript

```
function minEnergy(n: number, brightness: number, intervals: number[][]): number {  
  
};
```

C++

```
class Solution {
public:
    long long minEnergy(int n, int brightness, vector<vector<int>>& intervals) {

    }
};
```

C#

```
public class Solution {
    public long MinEnergy(int n, int brightness, int[][] intervals) {

    }
}
```

Kotlin

```
class Solution {
    fun minEnergy(n: Int, brightness: Int, intervals: Array<IntArray>): Long {

    }
}
```

Go

```
func minEnergy(n int, brightness int, intervals [][]int) int64 {
```

}
